

# Sprayer Cleanout Procedure 2010

## Valent Tank Cleaner

Upon completion of all your Valor® applications and **BEFORE** spraying over-the-top of any crop, be sure to clean out the tank, hoses, and nozzles with the new, uniquely formulated Valent Tank Cleaner.

This is the only tank cleaner that was specifically created for *Valor* and completely cleans the sprayer system when used according to these directions.

### Directions for Use

1. Completely spray out or empty any *Valor* spray mix from the sprayer.
2. **You must physically** clean out all strainers, filters, nozzles, nozzle screens, diaphragms, boom ends or anywhere that solution/residue could accumulate or stagnate in the sprayer.
3. Add 100 gallons of water to the spray tank, then add 1 gallon of Valent Tank Cleaner. Any ratio less than this will result in insufficient cleanout.
4. Agitate for 5 to 10 minutes. Then charge pumps, hoses, and nozzles by spraying a small amount of solution through the sprayer (ensure solution is spraying out of the nozzles).
5. Shut off sprayer, keeping the hoses and nozzles "charged" (under pressure).
6. Now add 1 gallon of Valent Tank Cleaner to the tank for every additional 200-400 gallons of water added until the tank is full. (If residue film is apparent in tank or solution sat in tank for multiple days due to rainout, increase to 2 gallons/200 gallons)
7. **Let tank and sprayer system sit overnight or at least a minimum of 12 hours.**
8. The next morning, spray out solution through the boom for 10 minutes and then drain remaining solution until sprayer is empty.
9. Flush spray tank with clean water and empty completely. Check all strainers, filters, nozzles, nozzle screens, and boom ends as this process can "strip" old residues from within the sprayer system.

**NOTE:** Following these procedures is critical to remove residue from the sprayer system. The Valent Tank Cleaner is available from your *Valor* supplier.
