**Mustang Max™**

**Stops Pests in Rice and Most Other Crops. Fast.**

Mustang Max™ insecticide from FMC has the power to quickly rid rice of rice stink bugs, rice water weevil (adults), oat birdcherry aphids, chinch bugs, leafhoppers and armyworms and other insect pests listed on the label. Mustang Max has a proven formula labeled on 128 crops and over 100 pests. Reliable for fast, effective, broad-spectrum control of any high threshold pest infestation and those approaching threshold. Recommended by universities and consultants, trusted by growers for fast, effective, broad-spectrum control.

- Apply as needed based on pest thresholds
- Can be applied with approved herbicides
- Can be used in dry or water seeded rice
- Apply by ground or air (5 GPA minimum for air)
- 12-hour restricted entry interval (REI)
- 14-day pre-harvest interval (PHI)
- Provides control of rice water weevil (adults), rice stink bug and several other important rice pests
- Works on contact
- Affects the central nervous system of insects
- Rapidly stops insects from feeding

These modes of action are particularly important to stopping pests that attack cotton and rice in their tracks. These pests steal yields and reduce quality by feeding, so it’s critical to stop them quickly to protect crops, yields and income.

**PRODUCT:** Mustang Max™

**SPECTRUM OF ACTIVITY:**
Rice stink bugs, rice water weevil (adults), oat birdcherry aphids, chinch bugs, leafhoppers and armyworms and other insect pests listed on the label.

**MODE OF ACTION:**
Absorbed by the insect cuticle through the spiracles or by ingestion, causes knockdown and paralysis, nerve poison on the peripheral and central nervous system of the insect.

**CHEMICAL PRODUCT IDENTIFICATION:**
Product Name: Zeta – Cypermethrin
Chemical Class: Pyrethroid

**PHYSICAL AND CHEMICAL PROPERTIES:**
Physical Form (Formulations): 0.8 EC
Melting/Freezing: Do not store below 20º F
Solubility in Water: The active ingredient in Mustang Max has low water solubility, allowing the product to become rainfast soon after the spray droplets have dried on plant surfaces. The EC formulation allows the product to suspend and disperse in water extremely well.
REGISTERED CROPS:
Corn, cotton, rice, soybeans (see label for other crop uses).

SPECIFIC CROP USE INFORMATION:
Rice

REGIONAL USE PATTERNS: RICE PRODUCTION AREAS
Mid-South
Delta
Texas

Rice water weevil control in dry seeded rice – make a foliar application as indicated by scouting for the presence of adults and/or feeding scars, usually within the time frame of 0-5 days after permanent flood establishment. Do not exceed 10 days from time of establishing permanent flood until insecticide application unless scouting indicates adult weevils are present. Control of adults may be done at later growth stages of rice development to reduce overwintering populations.

Rice water weevil control in water seeded rice – make first application after flooding when scouting indicates presence of adults and/or feeding scars. Application should be made when rice has emerged at least 0.5 inches within the time frame of 0-5 days after permanent flood establishment; under heavy migration to fields, start scouting 3-5 days after the initial application, and if needed, apply second application within 7-10 days of the first application. Control of adults may be done at later growth stages of rice development to reduce overwintering populations.

Rice stink bug control – to get best scouting results sample stink bugs between 8-10 a.m. and then 6-8 p.m. Check infestation levels using a sweep net at least 15 inches in diameter. Apply Mustang Max™ when there are 1.5 stink bugs per yard or 4 or more stink bugs are found per 10 sweeps up to and after panicle emergence. Repeat treatment as necessary to get proper control.
